## Professional Summary

Software Engineer with 7+ years of experience designing and delivering enterprise-grade applications for healthcare, government, and SaaS clients. Proficient in building scalable solutions using modern web technologies (React, Angular, Node.js, and AWS) and legacy systems (Java, Spring Boot, Heroku). Skilled in API integrations, and automation testing to improve performance, security, and building client trust. Familiar with using AI tools to help increase productivity and reviewing code to increase quality of products.

## Professional Experience

### Java Developer/Business Engineer – Kinetech Cloud

Remote – San Antonio, TX | Apr 2022 – Jul 2025

- Designed and deployed Java-based API integrations (ARCGIS, Google Maps, Twilio SMS, OpenData) into enterprise apps, aligning technical solutions with business workflows and working with cross-functional teams and third-party vendors.
- Built and presented automation solutions (Excel ingestion, address validation, OAuth authentication) that reduced client overhead and improved efficiency, utilizing Selenium for regression testing to reduce testing time and improve quality.
- Partnered with account executives to scope requirements, deliver technical demos, and create tailored proposals, showcasing ability to bridge Java development and AWS Cloud expertise with business needs
- Deployed scalable applications on AWS Cloud, leveraging EC2, S3, and Lambda for secure and cost-effective solutions.

### Senior Application Developer – Memorial MRI & Diagnostic

Houston, TX | Oct 2018 – Apr 2022

- Designed and integrated new functionality across 3 CMS applications using Mendix, Java, SQL, and REST APIs, enabling organizational expansion to interact with both patients and insurance companies. Deployed to AWS Cloud testing/production environments, utilizing command line, Kubernetes, and Docker.
- Engineered Java automation tool to map patient data and CPT codes to generate CMS PDF forms, utilizing Python to generate monthly revenue reports, and cutting billing prep time by 70% and increasing support team productivity by 30%
- Delivered presentations and technical documentation to leadership, enabling alignment between IT solutions and business goals.
- Built a secure Java + SFTP integration with EXA-PACS imaging software to automate processing of 300+ EDI files/documents per day under HIPAA compliance, working with the external support team to ensure all procedures are aligned.
- Generated valuable reports, extracting data from SQL to readable monthly revenue graphs using MS Excel.

### Customer Service Tech / Web Support – Hostgator

Houston, TX | Dec 2017 – Oct 2018

- Delivered high caliber technical support for 30–50 customers daily, resolving issues with WordPress, cPanel, domain configuration, SSL, security settings, email services, and provided sales support.
- Troubleshoot server-level issues via Bash scripting and Linux command-line tools, including database restores, DNS configuration, and file permission errors.
- Maintained 98%+ customer satisfaction through responsive, empathetic problem-solving.

## Projects

- Gundam CG Search Engine (2025) – Designed a custom search engine/tool for newly released cards, improving upon official website's search engine by adding additional attributes. Built on Angular, Node.js, and PostgreSQL, deployed on AWS Cloud.
- Secure File Migration Utility (2024) – Developed and optimized a Java batch tool for encrypting and migrating 10,000+ files from cloud storage to IBM FileNet for archiving municipal city documents, filterable based on date ranges.
- Healthcare Claim Processor (2022) – Built a Java Spring Boot microservice to validate and process HL7 patient records for insurance claims as they are processed through EXA-PACS system, reducing claim rejections by 15% and demonstrating ROI to stakeholders. Created reports using Excel to determine amount of claims year-to-year using MS Excel.
- Drink Ordering Kiosk (2016) – Led and designed an order kiosk concept utilizing Java, JavaFX, SFTP file transfer for ease of fully customizable drinks or dynamically update existing menu with new options. Implemented Vonage REST API for text message notifications when drinks orders have been fulfilled, highlighting potential revenue opportunities.

## Education & Certifications

B.S. in Computer Information Systems – University of Houston, 2014–2017

Advanced Developer Certification – Mendix (2022)

## Skills

Languages & Frameworks: Angular, Node.js, Java, J2EE, Spring Boot, C#/.NET, SQL, JavaScript, React, Python, Ruby on Rails, Bash  
Cloud & Integrations: AWS (EC2, S3, Lambda), Docker, Kubernetes, Google Maps API, Twilio, SFTP, HL7, OAuth, Apache POI, OAuth  
Tools & Platforms: MS Excel/Word, Vim, Xcode, VS Code, Eclipse, IntelliJ IDEA, Mendix, Selenium, OAuth, Jira, Git, Github Actions, Github Copilot, Windows 10/11, Mac, iPhone, Android, Adobe CS (Photoshop, Illustrator, Acrobat), Cursor AI  
Soft Skills: CI/CD, Agile/Scrum, Project Management, Documentation, Team Collaboration, Business-focused, Presentation, Design
